

KE starts from maximum, since x starts from equilibrium.

15 Ans: D

Total energy is proportional to amplitude square.

Reading off the graph, the final amplitude is 1.25 cm, and initial amplitude is 5.0 cm.

Therefore, ratio of final TE / initial TE = $(1.25 / 5)^2 = 1 / 16$

Hence, fraction of energy lost = $1 - 1/16 = 15/16$

16 Ans: B
