

	of the ball's initial velocity) and hence never zero.
4.	Ans: D Area under F-t graph gives the impulse. Impulse is the change in momentum ($m\Delta v$) $\frac{1}{2}F_{\max} (2.0 + 6.0) \times 10^{-3} = 58 \times 10^{-3} (34 - (-34))$ $F_{\max} = 986 \text{ N}$
