

12

D

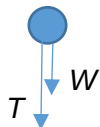

At the bottom of the circle,

$$T - W = mv^2 / r$$

$$T = W + mv^2 / r$$

At the top of the circle,

$$T + W = mv^2 / r$$

$$T = mv^2 / r - W$$

Hence, the tension is greatest when the stone is at the bottom of the circle.

13

B

GPE = Scalar sum of the GPE between masses at X and B and between
