

		$\lambda = 75.2 \text{ cm} \Rightarrow \text{frequency} = 440 \text{ Hz}$
20	D	The electric field pattern shows the direction that a small positive test charge would follow. At X, a small positive test charge will be in the direction of the (tangential) electric field (i.e. in A's direction). However, since the test charge is negative, the force on the electron is in the opposite direction (i.e. D)
21	A	The hollow metal sphere is a good electrical conductor and as such, excess
