

9	B	For an object to be in equilibrium with three coplanar forces acting on it, (a) The vector sum of the three forces must form a closed loop diagram. (Option C not possible) (b) Net moment about any point must be zero. (Option D not possible) (c) Line of action of the three forces must pass through a common point (Option A not possible)
10	C	Assume the sphere is dropped from a height h
