27 A green laser pointer and a red laser pointer of the same power cast circular images on a white screen of the same diameter. The wavelengths of the green and red lasers are λ_G and λ_R respectively.

If the pressure exerted by the green laser on the screen is p, what is the pressure exerted by the red laser?

A p **B** $\frac{\lambda_G}{\lambda_R} p$ **C** $\frac{\lambda_R}{\lambda_G} p$ **D** $\left(\frac{\lambda_G}{\lambda_R}\right)^2 p$
