2 A student determines the resistivity ρ of a wire using

$$\rho = \frac{\pi d^2 V}{4IL}$$

where d is the diameter of the wire, L is its length, V is the potential difference across the wire and I is the current through it.

The percentage uncertainty in the measurements of d, L, V and I are 3%, 2%, 1% and 0.5% respectively.

What is the percentage uncertainty in ρ?

A 4.5% **B** 6.5% **C** 7.5% **D** 9.5%
