14 A beam of light of wavelength λ is incident normally on a diffraction grating. The angular separation between the two third order maxima is θ, and the number of lines per metre of the grating is d.

Which row shows possible values of λ, θ and d?

	λ	θ	d
A	450 nm	25°	3.2×10^5 lines per metre
B	450 nm	30°	1.9×10^5 lines per metre
C	650 nm	38°	3.2×10^5 lines per metre
D	650 nm	46°	1.9×10^5 lines per metre
