26 A flat circular coil of 720 turns, each of area 0.060 m^2, is placed with its plane aligned at 35° to a uniform magnetic field as shown below. The magnetic flux density of the field is changed steadily from 70 mT to 40 mT over a duration of 5.0 s.

What is the average e.m.f. induced in the coil during this duration?

A 0.15 V **B** 0.21 V **C** 0.26 V **D** 0.74 V
