15 The graph shows the variation with position x, at a particular instant, of the pressure p in a progressive sound wave travelling through air, where P_{atm} is the atmospheric pressure.

Which of the following statements is correct?

A W is a pressure node and X is a pressure antinode.

B The air particle at position X has zero displacement from its equilibrium position.

C The amplitude of oscillation of the air particle at point X is twice that of the particle at point Z.

D The phase difference between the oscillations of the air particles at point Y and point Z is $\frac{3}{2}\pi$.
