

		Therefore, frequency = 18 Hz
18	C	$\lambda = \frac{v}{f} = \frac{36}{400}$ $\frac{\Delta x}{\lambda} = \frac{\Delta \phi}{2\pi}$ $\Delta \phi = \frac{\Delta x}{\lambda} (2\pi)$ $= \frac{0.18}{\frac{36}{400}} (2\pi)$ $= 4\pi$ A phase difference of 2π is equivalent to a phase difference of 4π.
19	B	Consider Rayleigh's criterion
