

- 19 A** An electric field strength upwards means that the lower plate is at a higher potential than the upper plate (**Options C and D are eliminated**)

$$E = \frac{|\Delta V|}{d}$$

$$(V_{\text{lower}} - V_{\text{upper}}) = Ed$$

$$-6 - V_{\text{upper}} = 4000(4 \times 10^{-3}) = 16$$

$$V_{\text{upper}} = -22 \text{ V}$$
