

11	A	There are only two forces acting on the person, force of cage on him, $\mathbf{R}$ and his weight, $\mathbf{W}$. Since the man is in uniform (i.e. constant speed) circular motion, the net force on him is directed toward the centre of the circle, i.e. toward the right. The vector sum of $\mathbf{R}$ and $\mathbf{W}$ must point toward the right. Vertical component of $\mathbf{R}$ must balance the weight. Horizontal component of $\mathbf{R}$ provides the centripetal force (which is also the net force). 
12	C	Option A: The variable x is denoted as the distance above the surface of the earth. It is not defined from the
