

		means that the target metal is the same.
29	A	Difference in binding energies of products and reactants = Gain in kinetic energies of products + Energy of gamma ray $(39.25 + 28.48 - 64.94) = 2.31 + E$ $E = 0.48 \text{ MeV}$

30	A	A range of (kinetic) energies indicates a range of speeds for the β particles
