

		anticlockwise. current pass through both resistors.
28	C	Photocurrent is proportional to intensity. Intensity is proportional to (amplitude)². $\frac{\text{amplitude of wave P}}{\text{amplitude of wave Q}} = \sqrt{\frac{\text{intensity of wave P}}{\text{intensity of wave Q}}} = \sqrt{\frac{\text{photocurrent of wave P}}{\text{photocurrent of wave Q}}}$ $= \sqrt{\frac{4}{1}} = 2$
29	B	Energy of red wavelength photon
