29	B	Energy of red wavelength photon $= \frac{hc}{\lambda} \approx \frac{(6.63 \times 10^{-34}) \times (3 \times 10^8)}{600 \times 10^{-9}} \times \frac{1}{1.6 \times 10^{-19}} = 2.1 \text{ eV}$ Only option B's energy difference is the closest to red wavelength
30	D	Nucleon number = $232 - 4 + 0 + 0 + 0 - 4 = 224$
