

3 (a) Pressure = $\rho gh = 900 \times 9.81 \times 6.0/100$

M1

= 530 Pa

A1

- (b) weight and upthrust drawn in correct places (weight starts along the central blue dotted line and upthrust from centre of submerged part, ignore lengths) B1

the object turn anticlockwise (rotating ACW and CW with decreasing angle) until the weight and upthrust are on the same line of action (dotted line is vertical) B1

- 4 (a) The gravitational field strength at a point in a gravitational field is defined as the **gravitational force**
