

20	A	For light sources to be resolved, angle of separation of the 2 sources $\geq$ minimum angle of separation by Rayleigh criterion $\theta \geq \theta_{\min}$ $\frac{S}{D} \geq \frac{\lambda}{d}$ where S is the distance between the 2 sources $S \geq \frac{\lambda D}{d}$ The best combination is the one that can resolve the smallest distance S between the two sources i.e. shorter λ and D and larger d.
21	D	Charge of sphere is Q
