

		is no magnetic force induced on coil 1 in all directions.
26	B	As the wire is raised vertically, it cuts the horizontal component of the Earth's magnetic flux density. $E = B_H L v$ $= (B \cos 50^\circ) L \left(\frac{d}{t} \right)$ $= (3.0 \times 10^{-5}) \cos 50^\circ \times 15 \times \frac{5.0}{150 \times 10^{-3}}$ $= 0.0096418 \text{ V}$ $= 9.6 \text{ mV}$
27	A	For an ideal transformer
