

8	A	Work done by the force to extend the spring is given by the area under force-extension graph i.e. the area bounded by the graph and the vertical axis of the graph given. This work done goes to increase the potential energy of the spring. The potential energy represented by area P is released upon the removal of the force. The potential energy represented by area Q is retained in the spring that is permanently stretched i.e. the energy used to separate the particles of the spring further apart.
