

By Fleming's Left hand rule, force on w_1 (due to w_2 only) is directed to the left.

25 Ans: D

Moment about pivot = Fd where $d = 0.23$ m, $F = B/L\sin 90^\circ$, $L = 0.093$ m, $B = 3.6 \times 10^{-2}$ T

$$\rightarrow [B/L\sin 90^\circ] \times d = 7.4 \times 10^{-3}$$

$$\begin{aligned}\rightarrow I &= (7.4 \times 10^{-3}) \div [BLd] \\ &= 9.6 \text{ A}\end{aligned}$$
