

19	A	E field point from high V to low $V \Rightarrow$ E field point towards right Since electron is -vely charged, electric force on electron points towards X or away from Y. Change in EPE from X to Y = $EPE_Y - EPE_X = -eV_Y - (-eV_X) = -70 \text{ eV} + 100 \text{ eV} = +30 \text{ eV}$
