

		R	6
23	A	Taking moments about pivot, $F_B \times L \cos 30^\circ = 0.12 \times \frac{L}{2} \sin 30^\circ$ $50B(0.40)(60 \times 10^{-3}) \cos 30^\circ = 0.12 \times \frac{1}{2} \sin 30^\circ$ $B = 0.029 \text{ T}$	
24	C	Force causing deflection acts upwards hence magnetic force is upwards
