

		$B = 0.029 \text{ T}$
24	C	Force causing deflection acts upwards hence magnetic force is upwards. Using Fleming's left hand rule, current is opposite in direction to motion of particle so it must be negatively charged.

2024 H2 Physics Paper 1 Solutions

		If direction of magnetic force is upwards, electric force must be downwards so electric field must be upwards
25	D	Maximum flux linkage occurs when the B field lines are perpendicular to coil, i.e. either
