

		When flux linkage is maximum , induced e.mf. will be minimum (zero) and vice-versa.
26	B	Step up transformer $\Rightarrow$ no. of turns in secondary coil N_s $>$ no. of turns in primary coil N_p Since magnetic flux ϕ in both coil is equal as it is an ideal transformer, $N_s \phi > N_p \phi$ Ideal transformer $\Rightarrow \frac{I_s}{I_p} = \frac{V_p}{V_s} = \frac{N_p}{N_s} < 1$
27	D
