

Q11 Ans: C

Since displacement towards the right is taken as positive, we can label the directions of displacement of air molecules as follows:

It can be seen from the figure that at point **C**, it is a region of rarefaction as air molecules on the left side of **C** is displaced to the left and on the right side of **A**, they are displaced to the right. Hence **C** has the minimum pressure.

Q12 Ans: B
