

**21.** In the following diagrams, the thin lines show equipotential lines and the bold arrows show the electric field lines and their directions.

Which set of equipotential lines and field lines is possible?

**Ans: A**

Electric fields point from higher electric potential to lower electric potential.

Electric field lines are perpendicular to equipotential lines.

**22** A current  $I$  of magnitude  $9.6\text{ mA}$  is passed into a current balance which consists of a
