

		thus the loop will move to the right.
25	C	Using Fleming's Left Hand Rule, electrons in the conductor are moving to the right and will experience a force upwards in a magnetic field pointing out of the plane of the page. Hence, S will be at a higher potential as electrons will gather at R. $\mathcal{E} = Blv$ $= (2.8 \times 10^{-3})(15 \times 10^{-2} \times \sin 60^\circ)(10)$ $= 3.6 \times 10^{-3} \text{ V}$ $= 3.6 \text{ mV}$ (Each quantity in the equation should be components that are perpendicular to each other.)
26	A	$V = 150$
