

		Therefore $A = (200 \pm 10) \text{ cm}$
2	C	During free fall, $v = u + at$ $v = 0 + (-9.81)(1.0)$ $v = -9.81 \text{ m s}^{-2}$ On hitting the sand, $v^2 = u^2 + 2as$ $0 = (-9.81)^2 + 2a(8.0 \times 10^{-3})$ $a = -6.0 \times 10^3 \text{ m s}^{-2}$
3	B	Considering car and trailer as a single system to find common acceleration
