

- 11** All geostationary satellites lie on the equatorial plane of  $0^\circ$  latitude.

Why is there no geostationary satellite at the other latitudes shown?

- A** Such a satellite would require a continuous input of energy to maintain its orbit.
- B** Such a satellite would not have a period of 24 hours.
- C** Such a satellite would orbit from east to west.
- D** Such a satellite would be too heavy.
