

20 In discussing electric fields, the terms 'electric field strength', 'electric potential' and 'potential gradient' are used.

Which statement about these terms is **true**?

- A** Electric potential decreases linearly away from a positive charge.
- B** Electric potential and potential gradient are both scalar quantities.
- C** The potential gradient at a point is numerically equal to the electric field strength at that point.
- D** Electric field strength at a point is the electric force acting on a charge per unit mass placed at that point.
