

- 27** X-ray spectra are taken from two X-ray tubes **P** and **Q**. The intensity of the X-rays is plotted against the wavelength in both cases and is shown below.

What deduction can be made from these plots?

- A** X-ray tube **Q** has the higher voltage applied to it and the target material in both tubes is the same.
- B** X-ray tube **Q** has the higher voltage applied to it and the target material in both tubes are different.
- C** X-ray tube **P** has the higher voltage applied to it and the target material in both tubes is the same.
- D** X-ray tube **P** has the higher voltage applied to it and the target material in both tubes are different.
