

- 5 Ball A travelling at a speed of 6.0 m s^{-1} collides elastically with Ball B travelling at a speed of 1.0 m s^{-1}

Ball A has a larger mass than Ball B.

Which are the possible velocities of the two balls after the collision?

	Ball A's velocity	Ball B's velocity
A	1.0 m s^{-1} , to the right	6.0 m s^{-1} , to the right
B	1.0 m s^{-1} , to the left	6.0 m s^{-1} , to the right
C	1.3 m s^{-1} , to the right	8.3 m s^{-1} , to the right
D	1.3 m s^{-1} , to the left	8.3 m s^{-1} , to the right
