

Answer: B

12 Using $pV = nRT$, product of pV is proportional to T for fixed mass of gas.

pV value at J = 1×10^{-5} J

pV value at K = 7×10^{-5} J

pV value at L = 12×10^{-5} J

pV value at M = 8×10^{-5} J

Value is largest at point L, followed by M, K then J (in descending order).

Answer: D

13 The ideal gas undergoes an expansion
