

- 16** A tube of fixed length is closed at one end. When a source of frequency 300 Hz is sounded over the open end, the air in the tube resonates in its fundamental mode. The frequency of the source is then gradually increased until the air column resonates again.

Neglecting end correction, what is the frequency of the source now?

- A** 450 Hz
- B** 600 Hz
- C** 750 Hz
- D** 900 Hz

- 17** Light of wavelength 600 nm falls on a pair of slits, forming fringes 2.0 mm apart on a screen
