magnetic field **into** plane of paper

magnetic field **into** plane of paper

For no deflection, magnetic force = electric force

$$Bqv \sin 90^\circ = qE$$

$$B = \frac{E}{v}$$

Answer: A

24 Force acting on a single wire $F = BIl = (0.010)(5.0 \times 10^{-3})(8 \times 10^{-3}) = 4 \times 10^{-7} \text{ N}$
