

- 24** A rectangular coil of sides 8.0 mm by 12.0 mm and containing 20 turns is suspended at the centre of a long horizontal solenoid so that two sides of the coil are vertical and the other two sides are parallel to the magnetic field of 0.010 T as shown below.

If the current through one turn of the rectangular coil is 5.0 mA, what is the torque of the couple acting on the coil?

- A** 0 N m
- B** 4.8×10^{-8} N m
- C** 6.4×10^{-8} N m
- D** 9.6×10^{-8} N m

- 25** A bar magnet is dropped vertically from above a coil that is connected to a galvanometer
