

- 25** A bar magnet is dropped vertically from above a coil that is connected to a galvanometer. As the magnet approaches the coil, the galvanometer deflects to the right by 10 units.

What is the deflection of the galvanometer as the magnet leaves the coil?

- A** To the left by less than 10 units.
- B** To the left by more than 10 units.
- C** To the right by less than 10 units.
- D** To the right by more than 10 units.

26 The graph shows the variation with time of the magnetic flux linkage of a coil
