

Answer: B

2 A: Incorrect. The absolute uncertainty of diameter will stay the same.

B: Correct: Using the gradient to find spring constant is equivalent to taking a few readings and finding the average, hence, random error can be reduced.

C: Correct. Zero error is a systematic error.

D: Correct.

$$\Delta T = \frac{\Delta t}{n}$$

where n is the number of oscillations. A large number of oscillations will reduce ΔT .

Answer: A

2 Consider the horizontal distances
