

- 5 A beaker of water of total weight W is placed on a weighing scale. A mass of weight M is then lowered into the beaker of water, while suspended from a spring balance using a light inextensible string. The reading on the spring balance is T when the mass is fully submerged in the beaker of water as shown. No water is spilled from the beaker in the process.

What is the reading on the weighing scale when the mass is fully submerged in the beaker of water?

- A $W + M$
- B $W + T$
- C $W + M + T$
- D $W + M - T$

6 A car with a power output of 90 kW can travel at a maximum speed of 55 m s^{-1} along a
