

	system will increase.
17	In terms of number of cycles, $\text{phase difference} = \frac{\Delta x}{\lambda} = \frac{2.0}{\cancel{v}/\cancel{f}} = \frac{2.0}{48/27} = 1.125$ Difference of 1.125 is the same as 0.125 of a cycle since the cycle repeats itself.
18	$\underline{\text{maximum possible intensity}} = \left(\underline{\text{maximum possible amplitude}} \right)^2$
