30 A uranium-235 nucleus $^{235}_{92}U$ undergoes fission, producing nuclei of lanthanum-146 $^{146}_{57}La$ and bromine-87 $^{87}_{35}Br$. The binding energies per nucleon of these nuclides are shown below.

nuclide	binding energy per nucleon / MeV
$^{235}_{92}U$	7.6
$^{146}_{57}La$	8.2
$^{87}_{35}Br$	8.6

What is the energy released during fission of uranium-235?

A 9.2 MeV **B** 69.2 MeV **C** 90.2 MeV **D** 159.4 MeV
