11 The Moon has a diameter that is approximately 0.25 times the diameter of the Earth, and the mass of Moon is 0.012 times the mass of the Earth.

Given that the gravitational potential at the Earth's surface is –63 MJ kg^{-1}.

What is an approximate value for the gravitational potential at the surface of Moon?

A –0.19 MJ kg^{-1} **B** –3.0 MJ kg^{-1} **C** –12 MJ kg^{-1} **D** –1300 MJ kg^{-1}
