A -4.3×10^{13} J **B** -2.7×10^{6} J **C** 2.7×10^{6} J **D** 4.3×10^{-13} J

20 W, X, Y and Z are four points on a square as shown.

Two point charges each of charge +*Q* are at W and X.

Which of the following statements is true when the point charge at X is moved to Y while the charge at W remains fixed?

A The electric potential at Z will decrease.

B The electric potential energy of the system will increase.

C The repulsive force between the two charges will increase.

D The magnitude of the electric field strength at Z will increase.
