8 Two identical objects rest on a rough, flat, horizontal turntable.

The turntable starts to rotate about its central axis O at an increasing angular velocity.

Initially, both objects are moving in uniform circles.

At a particular angular velocity, one of the objects slides off the turntable.

Which of the following statements is correct?

A The friction experienced by P and Q are always equal.

B P experiences larger friction than Q.

C Q will start to slide first as it has a larger angular velocity.

D Q will start to slide first as it is at a larger radius.
