A	$2I = I_o \sin (2 \omega t)$								
B	$I = 2I_o \sin (2 \omega t)$								
C	$I = \frac{1}{2} I_o \sin (2 \omega t)$								
D	$I = 2I_o \sin (\frac{1}{2} \omega t)$								

Answer: D

I_o is the amplitude and ω is the angular frequency.

With double the period, it means half the angular frequency.
