

Damping increases the period of oscillation slightly.

16 6 minima means 6 internodal distances have passed through the microphone

$$6\left(\frac{\lambda}{2}\right) = 80 \text{ cm}$$

$$\lambda = \frac{80}{3} \text{ cm}$$

$$f = \frac{v}{\lambda} = \frac{330}{\frac{80 \times 10^{-2}}{3}} = 1237.5 \text{ Hz}$$

17 When both polarisers are aligned, the Amplitude of light from each slit is A .
