

- 25** As the magnet is now being dropped from a higher point in diagram 2, the velocity that it enters the solenoid is higher. The increase in magnetic flux linkage upon entry and exit are both higher than in diagram 1a. By Faraday's Law, the magnitude of the induced e.m.f. will be greater (having higher spikes).

As the poles of the magnets is reversed in diagram 2, by Lenz Law, the direction of the induced e.m.f. will be in opposite direction to the one in diagram 1a.

- 26** Changing frequency of the sinusoidal a.c. supply does not change the r.m.s. voltage or r.m.s.
