

current. Therefore, the mean power dissipated at the resistor remains the same.

27

$$V_s = \frac{hc}{e} \left(\frac{1}{\lambda} - \frac{1}{\lambda_o} \right)$$

$$4.8 = \frac{hc}{e} \left(\frac{1}{\lambda} - \frac{1}{\lambda_o} \right) \dots\dots\dots (1)$$

$$1.6 = \frac{hc}{e} \left(\frac{1}{2\lambda} - \frac{1}{\lambda_o} \right) \dots\dots\dots (2)$$

Solving, $\lambda_o = 4\lambda$

28 $\Delta F = hc/\lambda$
