

(modified from 2014 P1 Q13)

12 B

$$pV = nRT$$

$$(1.2 \times 10^5)V_1 = (50 + 273)$$

$$(6.0 \times 10^5)V_2 = (200 + 273)$$

$$5 \frac{V_2}{V_1} = \frac{473}{323}$$

$$\frac{V_2}{V_1} = 0.29$$

13 B A At higher temperature, the average KE of molecules are higher. Evaporation occur at a
